

## **TIXEO PROVIDES EASIER ACCESS TO ITS SECURED VIDEO CONFERENCES**

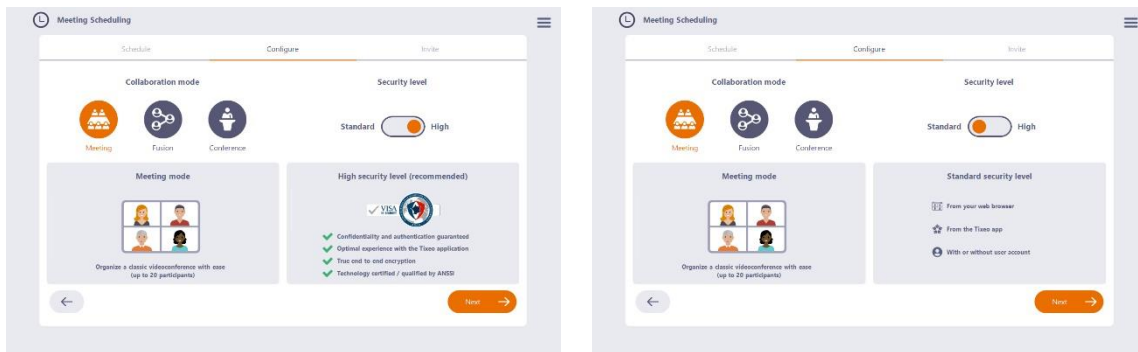

Paris, April 27, 2021 - Tixeo - French editor providing the only video conferencing technology certified and qualified by ANSSI - announces that it simplifies accessibility to its video conferences to make it a simple reflex and thus optimize remote collaboration for its customers. To do this, the editor offers new features such as the ability to join a meeting via a web browser and to connect without creating a personal account. These improvements are integrated into a brand new interface, also redesigned to facilitate and enrich the user experience.

### **New features for better accessibility**

**Tixeo now includes a web access** to easily and quickly join videoconference meetings. This access mode is configurable by the videoconference organizer during the planning phase according to the confidentiality level of the exchanges. Web access means a standard security level in addition to the **high security level (ANSSI certified) that is set by default for Tixeo meetings**. It will be up to the organizer to define the level of confidentiality he wants to activate, depending on the content of the exchanges:

- **the high security level**, which remains the "default" mode requires attendees to download the Tixeo software and create credentials, or
- **the new standard security level**, allowing attendees to access the meeting directly via the web without having to download the software and login.

**Tixeo goes further and completes this ease of access by giving the possibility to join a videoconference without having to create a personal account.** Participants simply enter their personal meeting ID and PIN code received in the invitation email: they then join the meeting directly from their web browser or from the Tixeo application whether they are on a mobile device or on a computer.

**Tixeo has also completely redesigned its solution** to offer its customers a more modern and user-friendly interface, thus improving the user experience.

*«We want to provide our users with an easy access to Tixeo meetings. It will be up to the videoconference organizer to assess the level of privacy needed for the meeting and to allow or not the access via a simple browser. This web access, including a standard security level, is particularly well suited for meetings with occasional participants. For meetings with regular attendees and to ensure complete privacy of communications, Tixeo continues to offer the high security level - enabled by default - which requires downloading and installing the Tixeo application. For this high-security use, nothing changes for our existing customers.»* **says Renaud Ghia, president of Tixeo.**

### **Security and privacy: Tixeo's DNA**

Tixeo was one of the first French companies to make the promotion of secure exchanges its mission. For more than 15 years, the European editor has been developing secure video conferencing solutions, including true multipoint end-to-end encryption of communications (video, audio, data) as well as encryption of communication links between clients and server in order to help organizations fight against cyber-attacks. The Tixeo solution brings unique and optimal safety, recognized by private and public actors.

*«At Tixeo, security is not an option, it remains the core of our solution and is integrated by default in all our offers. However, we want to make the experience even more fluid by offering a web access for customers who exceptionally want to organize some meetings that do not require a high level of confidentiality and offering a simplified access.»* **adds Sébastien Jeanjean, vice-president of Tixeo.**

The feature to activate the standard security level (including web access) is included in TixeoCloud Premium. It is optional in TixeoPrivateCloud and TixeoServer.
