

## TIXEO strengthens the security of its PrivateCloud offering with SecNumCloud hosting

**Paris, 19 SEPTEMBER 2023** - TIXEO, the European leader in secure video collaboration and the only CSPN-certified technology qualified by the French Information Systems Security Agency (ANSSI), is upgrading its private cloud offering, TixeoPrivateCloud. From now on, data hosting will be SecNumCloud-qualified, reinforcing the security levels offered. This development will enable TIXEO to provide its customers in sensitive sectors such as defence, justice and industry with optimum security guarantees.

### Data security in the cloud should no longer be an option

According to a recent survey carried out by Thales, three quarters of IT managers believe that more than 40% of their data stored in the cloud is sensitive. When the cloud in question is poorly secured and subject to flexible data protection legislation outside Europe (such as the Cloud Act), this represents a major cyber threat to the integrity of organisations.

### Additional protection for secure videoconferencing

For many years, TIXEO has hosted its secure videoconferencing solution in a secure, sovereign cloud. Aware of the high risks associated with the cloud and committed to strengthening the cybersecurity of organisations, the French leader in secure videoconferencing is upgrading its TixeoPrivateCloud offering (private cloud for secure videoconferencing) by hosting its data with SecNumCloud-qualified operator 3DS OUTSCALE. Thanks to its automated and secure cloud system and the high availability of its infrastructure, 3DS OUTSCALE provides maximum protection for TixeoPrivateCloud customers' data, ensuring reliability and responsiveness for their IT needs.

### **SecNumCloud qualification: a guarantee of security and European sovereignty**

SecNumCloud is a security qualification offered by ANSSI (Agence nationale de la sécurité des systèmes d'informations), the aim of which is to guarantee a high level of security for cloud computing operators and customers. To qualify, cloud providers must demonstrate compliance with the best practices and security standards listed in the SecNumCloud reference framework. Once SecNumCloud qualification has been received, it is akin to a recommendation for use of the service by the French government.

Furthermore, as a SecNumCloud-qualified cloud operator, 3DS OUTSCALE complies with European data protection legislation. That's why TIXEO trusts it to host its users' cloud data.

### **TIXEO is aiming for its own SecNumCloud qualification in the long term**

SecNumCloud-qualified hosting for TixeoPrivateCloud is a first step for the company.

Renaud Ghia, Chairman of TIXEO, explains: « *The next step is to have all our public and private Cloud offerings hosted by an ANSSI-qualified SecNumCloud operator. It's vital that we offer our users a secure videoconferencing solution hosted in a highly secure, trusted cloud. The cybersecurity challenges we face today are such that we are committed at every level to strengthening the protection of our users' data by relying on qualified European cloud operators. This also helps preserve the sovereignty of organisations in the most critical sectors.* »
